SOFTWARE projects

This portfolio presents a collection of innovative software solutions developed to solve real-world business challenges. Each project reflects a strong focus on functionality, user experience, and scalable design, covering a range of digital products built to improve efficiency, streamline operations, and support modern business needs. From concept to execution, every solution demonstrates a commitment to creating practical, reliable, and impactful technology.

WEBSIZEN

websiZen – HR Simplified

WebsiZen HRMS is an all-in-one human resource management system designed to simplify and modernize HR operations for growing businesses. From attendance tracking and employee management to recruitment, performance reviews, and payroll insights, everything is managed through a single smart dashboard. With real-time analytics, intuitive tools, and customizable modules, WebsiZen HRMS helps organizations streamline HR processes, improve workforce visibility, and make faster, data-driven decisions.

WEBRIXA

WebRixa is a smart, all-in-one system designed to simplify sales, purchases, and inventory management. Built for wholesale and distribution businesses, it helps manage stock, bulk sales, payments, and collections from a single streamlined platform. With clear insights and reduced manual errors, WebRixa enables faster operations and better business control.

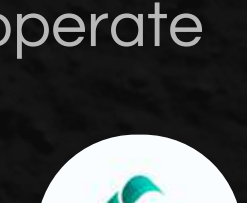

**FROM CONCEPT TO CLICK
— WE BUILD IT ALL**

WEBPOS

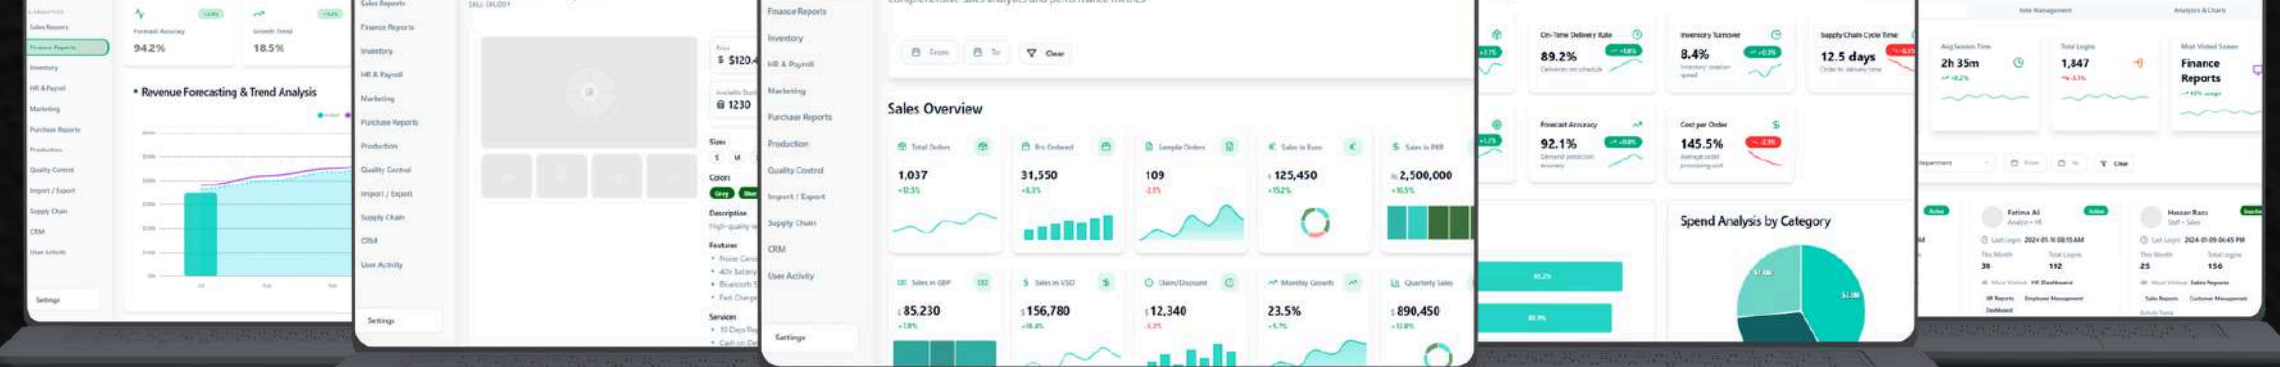

webPOS by Websi is a complete Point of Sale solution designed to streamline retail operations and boost efficiency. It integrates billing, invoicing, barcode scanning, stock management, customer records, and secure transactions into one powerful system. Built for retail stores, pharmacies, and supermarkets, webPOS provides the speed, accuracy, and control businesses need to operate smoothly and scale with confidence.

WEBSYNC

WebSync - Reports That Drive Results

WebSync is a modern Business Intelligence (BI) platform that transforms complex data into clear, actionable insights. With interactive dashboards, real-time analytics, and smart data tables, it enables businesses to analyze performance, automate reporting, and make faster, data-driven decisions from a single centralized system.

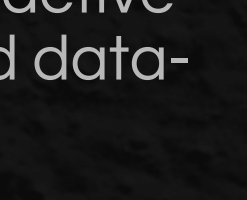

**WE DON'T JUST BUILD SOFTWARE –
WE BUILD BUSINESS CONFIDENCE**

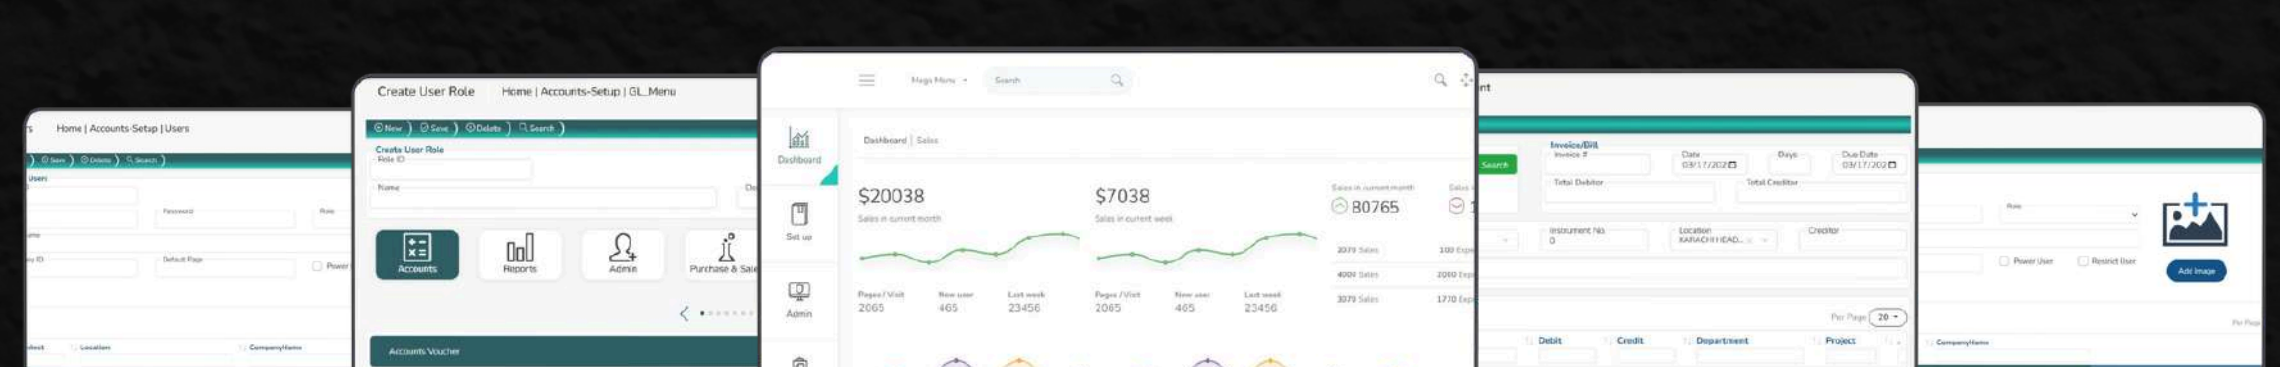

WEBNEX

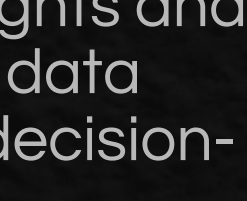

A complete inventory management system designed to streamline business operations and improve efficiency. The platform includes advanced features such as Shopify integration, automated shipping through courier APIs, barcode and QR-based job tracking, and a powerful product catalog. It also offers a POS system with a real-time cash register, a smart purchase workflow, interactive dashboards, and detailed reports to ensure better inventory control and data-driven decision making.

WEBORBIT

webOrbit is a powerful ERP solution designed to integrate and manage core business operations into a single platform. It connects projects, finance, sales, inventory, and CRM into one streamlined system, providing real-time insights and automated workflows. With its scalable architecture and centralized data management, webOrbit helps businesses improve efficiency, enhance decision-making, and grow with confidence.
